& MORE!

## PODIUM INTEGRATION

Depending on your software, Podium integration can automate messages to improve appointment show rates, follow up with customer inquiries, and stay on schedule through a modern customer communication platform.

- Job scheduled messages.
- Appointment reminders and confirmations.
- Tech dispatch notifications.
- Job completed messages.
- Feedback/quality assurance follow-up messages.
- Review invites.

With Podium Integration, your customers will get the convenience they want with a personal touch. By taking on the daily tasks and doing them behind the scenes, Podium frees up your staff to do other things. It's like another employee in your office, but one that doesn't need snacks.

## AUTOMATE ONLINE REVIEWS

Automate the ability to ask customers for online reviews through the Podium platform. This automation helps save you time while collecting online reviews, which are then distributed automatically across relevant online and social media platforms.

## REDUCE MISSED APPOINTMENTS

Missed appointments equal missed revenue. Spend less time chasing down customers and automatically remind and confirm every upcoming appointment. Podium automates appointment reminders and confirmations to keep your business running smoothly.

## COMMUNICATE BETTER. EFFORTLESSLY.

Podium integrates powerfully with your management software to do all the heavy lifting. Keep your customers in the loop with automated dispatch notifications and job updates along the way, all powered by text. Then once the job is finished, Podium sends your customers an easy link to leave a review.

## 3 EASY WAYS TO GET STARTED
